GEOGRAPHIC PROFILE OF CRIME

The previous two pages display maps of recorded crime, to indicate areas where crime is more prevalent. The first map gives a meaningful range of recorded crimes for each area, but takes no account of size or population of the different areas. The areas are based on the ward boundaries within Douglas, and Parish boundaries for the rest of the Island.

The second map shows the number of recorded crimes per 1000 of population of each ward, per year. One area, Victoria South, is disproportionately high as it is an area with several crime attractors, such as licensed premises, shops and workplaces, but a low resident population. This makes the calculation based on resident population give a misleading impression of the risk of crime.
